

Document 32. Personal Error Log Template

Fillable grid for tracking your own mistakes. The single highest-leverage revision activity is converting errors into permanent learning. Use this template after every timed practice, mock exam, and tutorial.

Section A. How to Use

1. After receiving a marked script, go through each part you lost marks on.
2. For each error, fill in one row of the table below.
3. Tag the error type so you can spot patterns over time.
4. Revisit the log at the start of each revision session: read the top 5 recurring errors and re-attempt one related question.
5. Treat the log as a sacred document: every error not logged will repeat.

Section B. Error Type Codes

- **KE** — Knowledge gap (concept, definition).
- **CW** — Command word misread.
- **DG** — Diagram error (curve placement, labels, equilibrium points).
- **EV** — Evaluation missing or inadequate.
- **CX** — Context anchor missing (no Singapore link).
- **TM** — Time management failure.
- **ST** — Structure (no signposting, no conclusion).
- **DR** — Data reference (numeric quote missing or wrong).
- **CL** — Calculation error (PED, multiplier, percentage change).

Section C. Error Log Table

Date	Question & Paper	Code	Error description	Correction / action

Section D. Pattern Tracker (review monthly)

Error code	Sep	Oct	Nov	Dec	Jan	Feb
KE Knowledge						
CW Command word						
DG Diagram						
EV Evaluation						
CX Context						
TM Timing						
ST Structure						
DR Data						
CL Calculation						

NOTE: Fill the cells with tally marks. After three months, your dominant error category becomes your priority revision area.
