

Document 3. Diagram Bank

Catalogue of core economic diagrams. For every diagram a blank version (for self-drilling) is followed by the labelled version (model answer). Drawn in TikZ to A-Worthy standards. *NOTE: When time is short, students should reproduce only the labelled curves, equilibrium points, and any shaded welfare areas — not decorative axes notation.*

Section A. Diagram 1 — Production Possibilities Curve (PPC)

Caption. Concave PPC showing maximum output combinations of consumer and capital goods. A, F = endpoint allocations; B = efficient interior allocation; G = inefficient (unemployed resources); H = unattainable.

Section B. Diagram 2 — DD/SS Equilibrium

Section C. Diagram 3 — Increase in Demand

Section D. Diagram 4 — Increase in Supply

Section E. Diagram 5 — Negative Production Externality

Caption. Negative production externality. Free-market equilibrium E_m over-produces relative to the social optimum E_s . Shaded triangle = deadweight welfare loss.

Section F. Diagram 6 — Positive Consumption Externality

Section G. Diagram 7 — Specific Tax

Section H. Diagram 8 — Price Ceiling (Maximum Price)

Section I. Diagram 9 — Price Floor (Minimum Price)

Section J. Diagram 10 — Perfect Competition (Long-Run)

Section K. Diagram 11 — Monopoly

Section L. Diagram 12 — Kinked Demand Curve (Oligopoly)

Section M. Diagram 13 — AD-AS (Keynesian Range)

Section N. Diagram 14 — Multiplier (kink interpretation)

Section O. Diagram 15 — Phillips Curve

Section P. Diagram 16 — Tariff (small country)

Section Q. Diagram 17 — Foreign Exchange (Appreciation)

Section R. Diagram 18 — Singapore MAS S\$NEER Policy Band

Section S. Diagram 19 — Circular Flow of Income (4-sector)

Section T. Diagram 20 — Loanable Funds Market

Drawing standard. Always label axes, every curve, every equilibrium point, and any shaded welfare areas. Place arrows only on axes, not on curves. Mark price and quantity changes with dashed lines back to the axes.
